

C Shape Steel Coil Hook Lifter

●● Product Introduction

The main body of the C-type lifting appliance is made of steel plates (high-quality low alloy steel) and steel pipes, spliced together. The cross-section is a box structure, which has good bending and torsion resistance. The lifting appliance is lightweight and has a long service life.

C-shaped hooks are mainly used for steel coil handling, steel coil tempering, warehouse storage and stacking, transportation and loading and unloading due to their material and shape. They are more commonly used in steel factories, and of course, special designs can be made according to usage requirements.

●● Product Features

1. Low cost and convenient maintenance.
2. There are restrictions on the stacking spacing or lifting sequence of steel coils.
3. Relatively low work efficiency.
