

Crane Hook Assembly

● Product Introduction

Hook is a lifting tool with a wide range of applications, including the transportation of goods in factories, the lifting of mining materials, petroleum, chemical industry, and docks. To ensure safety, the quality safety factor of the hook is 3 times the static load, and the lifting capacity is divided into 5-150 tons according to different purposes.

The lifting hook is a component used by cranes to lift heavy objects. There are many types of lifting hooks, which can be divided into forged hooks and sheet hooks according to manufacturing methods. The lifting hook can also be divided into two types: single hook and double hook.

● Basic Parameter: Lifting weight : 1-50T
