

LDA Type Electric Single Beam Crane

●● Product Introduction

LDA type electric single beam crane refers to a type of crane where the track is overhead and the main beam of the crane moves back and forth on the overhead track.

LDA type electric single beam crane has the characteristics of reasonable structure and strong rigidity. The whole machine is used together with CD type, MD type and HC type electric hoist. It is a kind of light and small-sized lifting machinery with lifting weight capacity 1t-20t, and span from 7.5m ~ 31.5m, the working grade is A3, and the working environment temperature is - 25 °C to 40 °C. LDA Type 1~20T Electric Single Beam Crane widely used in plants, warehouse, material stocks to lift goods. It is prohibit to use in the combustible, explosive or corrosives environment

●● Basic Parameter

Capacity	1T-20T	Span	7.5m-32m
Lift Height	6m-30m	Working Class	A3
Power source	380V 50hz 3P	Lifting Mechanism	electric hoist
