

YH Metallurgical Electric Hoist

● Product Introduction

Metallurgical electric hoist, also known as molten metal electric hoist, is generally installed on the I-beam track to lift heavy objects, and can make a straight line along the track, curve reciprocating motion, to ensure sufficient safety. It is suitable for working in an environment without fire, explosion hazard and corrosive medium, suitable for lifting molten metal and its operation in dangerous places, and the double brake is not allowed to disassemble a brake.

Metallurgical electric hoist mainly used for lifting molten metal.

● Basic Parameter

Lifting Weight	2T-10T	Hoisting Height	9m-20m
Hoisting Speed	8/2, 7/1.75 m/min	Travel Speed	20 m/min
Working Class	M3	Power Supply	380V 50hz 3P
