

## Steel Lifting Clamp

### ● Product Introduction

Steel pipe lifting for crane is divided into two series, one is fixed type, and the other is adjustable type. The adjustable type will be used for different mode and different layer square billets. The form of connecting with overhead cranes or gantry cranes can be designed in accordance with the actual status.

### ● Basic Parameter

Capacity	5T-40T	Hooks	Aluminum / Steel
Sizes	Customized size	Function	Heavy Material Transport

### ● Advantages

1. When using billet clamps, keep both arms symmetrical to avoid uneven clamping.
2. If the billet to be clamped is large, multiple double-arm clamps can be selected to fix it at the same time to ensure the firmness of the fixation.
3. After use, it should be cleaned and stored in time.
