

European Single Beam Overhead Crane

● Product Introduction

Single-girder European-style crane is a special type of single-girder crane. It combines European crane design concepts and technology with higher performance and wider application range. Compared with traditional single-girder cranes, single-girder European-style cranes have a more compact structure, more flexible operation, and can adapt to various complex working environments.

● Basic Features

1. It has light weight, compact structure and low energy consumption.
2. The limit distance between the hook and the wall is the smallest, and the clearance height is the lowest.
3. Compact and flexible: European-style single-girder cranes adopt a single-girder structure, the overall design is more compact, and the floor space is relatively small.
4. Lightweight design: Compared with traditional bridge cranes, European single-girder cranes have a lighter structure.

● Basic Parameter

Capacity	2T-16T	Span	7.5m-22.5m
Lift Height	10m-12m	Power source	380V 50hz 3P or customized
