

# Crane cab controller

## ● Product Introduction

Crane linkage platform is the key equipment used to control the motor starting, speed regulation, braking and reversing in the electrical equipment of lifting and transportation machinery and similar conditions. It is mainly composed of a protected left and right control box, movable seat and foot switch, suitable for AC 50HZ voltage below 380 volts and DC voltage below 220 volts power lines or control lines. The design of the linkage station takes into account the safety and convenience of operation. the right box is equipped with an emergency switch, the left box is equipped with an electric lock, start button and indicator light.

## ● Product Features

The linkage console adopts a control handle, the handle is composed of the upper and lower hemispheres spherical push rod, designed with a zero position self-locking device, to avoid the crane vibration and accidental collision caused by the control mechanism misaction. When the handle leaves the zero position, the joystick automatically returns to the zero position and realizes the zero self-locking, at the same time, the control handle also has the function of unlocking, in order to operate when necessary.

Use Category	AC-2	AC-15	DC-13
Electrical life (times)	7.5*104	10*105	6*105
